

Tube Scarfining

DIAMIL

tube & bar tools specialists

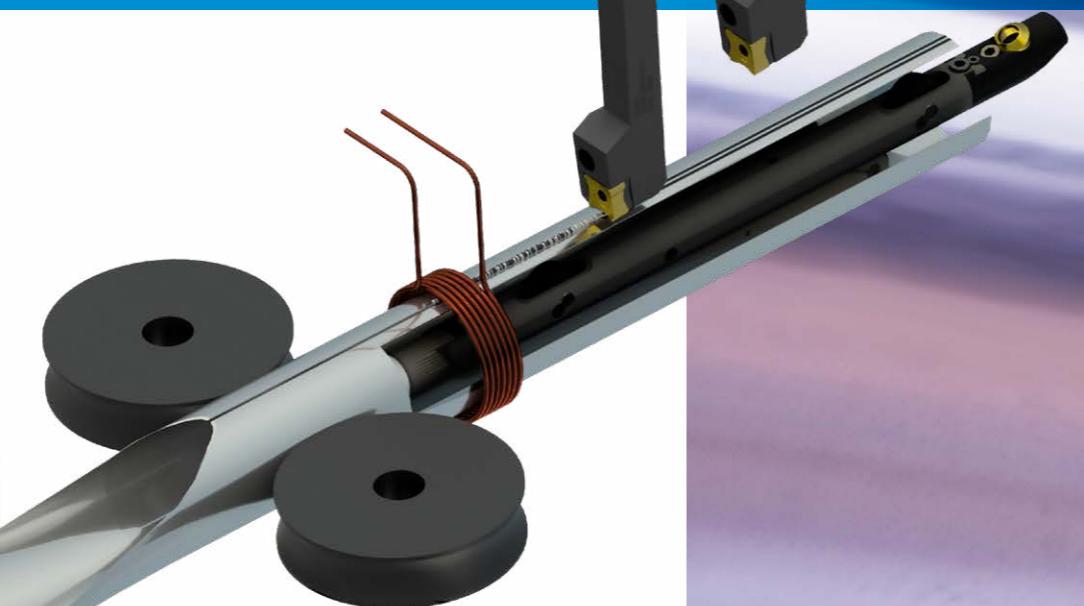

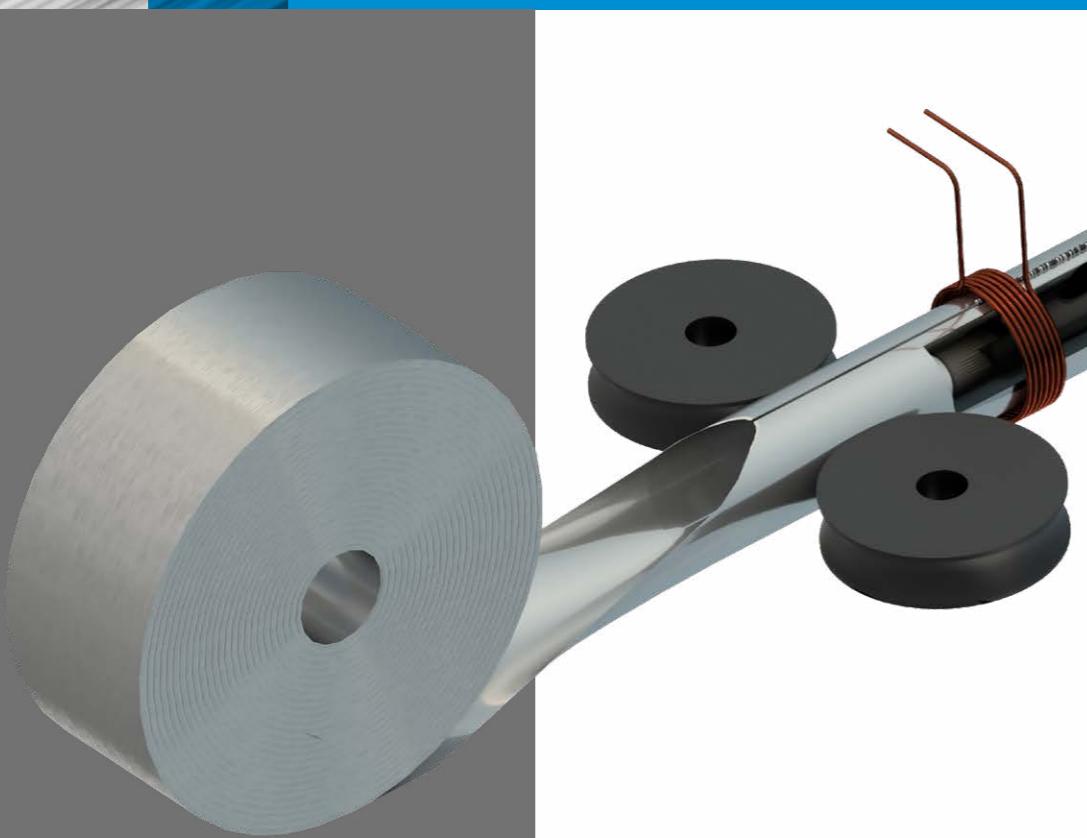

OMCD GROUP

The Italian brand

of tube & bar tools specialists

The added value of DIAMIL is that the people in charge of the design and the production of inserts **know firsthand** any problem and each aspect related to **the forming of the tube**: from sheet metal dragging wheels, to items for pipe end bevelling, up to the inserts and tools for the internal and external tube scarfing.

The know-how and experience of such a competent staff allow to create **products and solutions in line with the real needs** of the market, both for standard and customized items.

*We are what we repeatedly do.
Therefore, excellence is not an action, but a habit.*
Aristotle

External Scarfing

After forming and welding, the newly created pipe needs a removal of the excess material left on the outer surface of the welding area during the process.

For this purpose, Diamil has developed several product lines to cover every need:

1. STANDARD INSERTS | SNMX TYPES
2. POSITIVE INSERTS
3. POSITIVE INSERTS for thick tubes
4. SPECIAL INSERTS for bright finishing tubes

Our Hard Metal Grades for External Scarfing

[P812G]

Application range M25-M35 / P25-P35
CVD Multilayer Coating.

Very versatile grade that can be used for a wide variety of applications. Balances wear resistance and toughness very well, achieving excellent performance with most materials. Coating complements the grade, providing additional wear and high temperature resistance.

[P8DBC]

Application range M25-M35 / P25-P35
Multilayer mixed technology coating.
Premium version of the P812G grade, of which it maintains the main characteristics.

The special coating has been developed to obtain a surface layer with increased hardness and reduced roughness, to improve the performance in case of complex materials such as stainless steels and galvanized.

[D812G]

Application range M30-M45 / P30-P45
CVD Multilayer Coating.

Grade with high toughness, able to withstand the heaviest applications both in case of continuous and interrupted cutting. The grain size and composition have been specifically designed to reduce the risk of chipping and breakage to almost zero.

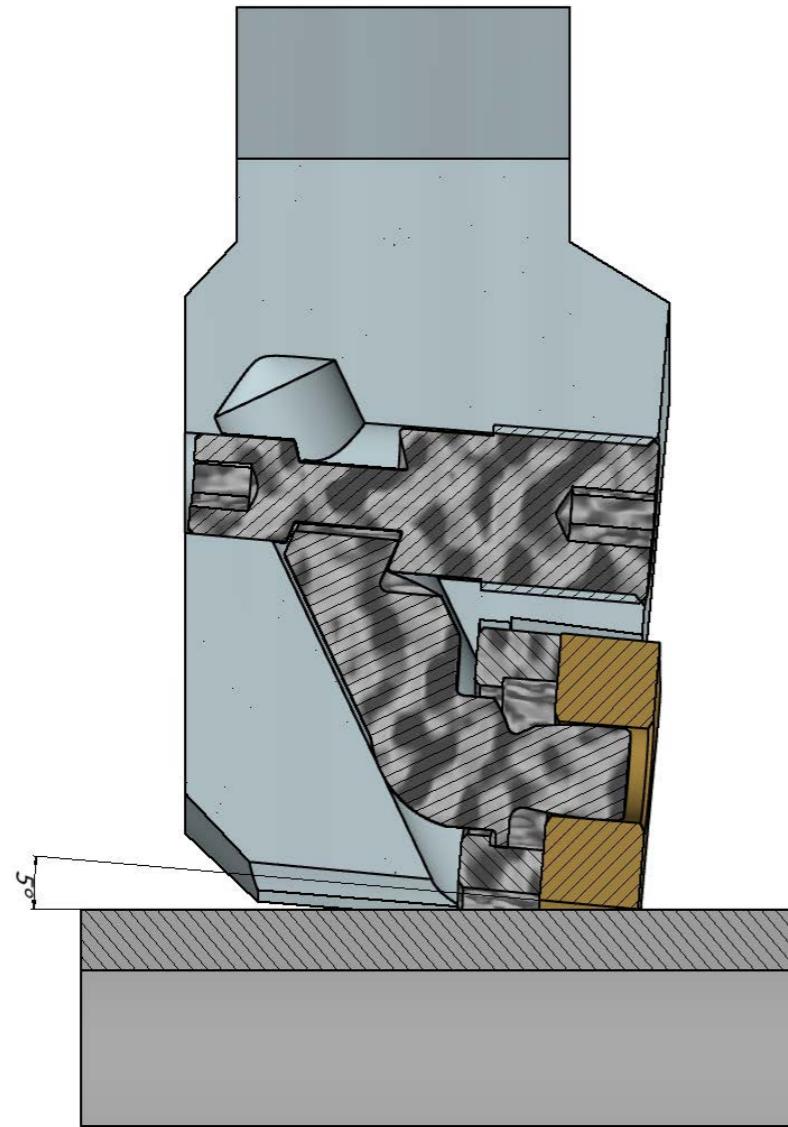

[D8DBC]

Application range M30-M45/P30-P45
Multilayer mixed technology coating.
Premium version of the D812G grade, of which it maintains the main characteristics.

The special coating has been developed to obtain a surface layer with increased hardness and reduced roughness, to improve the performance in case of complex materials such as stainless steels and galvanized.

Standard inserts SNMX Type 01

These inserts are suitable for Carbon steels, where the quality of the surface of the scarfed area is not a critical parameter.
Removed cord can be thick.

Standard inserts SNMX Type 02

This is our standard geometry. It is suitable for most applications. The spherical surface profile makes the cutting edge sharper and enables a more efficient cut, resulting in a smoother surface of the scarfed area.

Standard inserts SNMX Type 03

Type 03 is the only scarfing insert on the market that include a chip breaker, capable of improving the control of the removed bead and consequently of reducing the formation of large hanks, dangerous for the machine operator. Its shape is also more stable than the model 02 and the cutting edge is sharper.

Standard inserts **SNMX Type 04** | SNMG

Type 4 is a development of 02 Type, with higher stability and sharper cutting edge which improve performances, especially with stainless and galvanized steels.

Standard inserts

SNMX Type 05

Type 5 is a single face insert very similar to model 02 but with a deeper spherical profile, which makes the cutting edge much sharper. This “super positive” profile makes it perfect for special machining of stainless and aluminized steels.

Positive Inserts for thick Tubes

The positive cutting edge, in combination with generous size and very robust cutting edge geometry, makes these inserts perfect in case of thick pipes.

Tools for External Scarfing

Thanks to our skilled technicians, we design and produce all the tools, fixing systems and carbide supports, needed to hold the inserts during the scarfing process. We can offer both, standard tools and special ones, developed in accordance with the customer needs.

The following chart includes our ready in stock standard tools:

Internal Scarfing

Depending on the use of the tubes, it may be required that the weld bead on the inside surface of the welded area also has to be removed. In this case, it is necessary to use inserts specifically designed.

Depending on the type of chuck used and the characteristics of the tube itself, there are different types of inserts:

1. STANDARD RINGS
2. NAIL TYPE INSERTS
3. TOMB STONE TYPE INSERTS

Our Hard Metal Grades for Internal Scarfing

All the inserts are Made in Italy entirely designed and manufactured in our factory, from the powder mixing through grinding and finishing of the cutting edge, to the final operations: the coating process, which can be CVD or PVD.

M112G

Application range M35-M50 / P35-P50
CVD Multilayer Coating.

Standard grade for internal scarfing.
Medium grain size provides excellent stress resistance, minimizing the possibility of cracking and chipping. High-thickness coating increases resistance to wear and high temperatures.

M1DBC

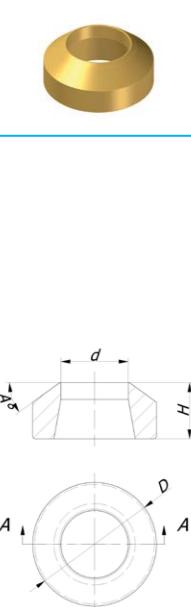

Application range M35-M50 / P35-P50
Multilayer mixed technology coating.

Premium version of the M112G grade, of which it retains the main features. The special coating has been developed to obtain a surface layer with increased hardness and reduced roughness, to improve the performance in case of complex materials such as stainless steels and galvanized.

Cutting Rings

Standard product line for internal de-burring rings, used in case of pipes up to 5mm thickness. Our line includes inserts with 42° cutting angle, used for the most common applications, as well as rings with 48° cutting angle (on request), which are normally used in case of aluminized tubes. They can be mounted on all types of RI-ME chucks, both mechanical and hydraulic.

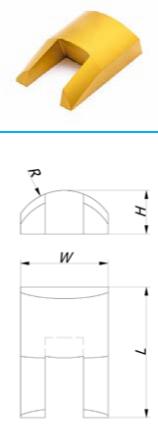

Code	Main size				Tube Inner Diameter		Grade	
	D	H	d	A	Min.	Max.		
	SR - AR				M112G	M1DBC		
SR0-AR4.5	8	4	4	42°	14	17	◆	◆
SR0-AR5.5	8	4	5	42°	16	17	◆	◆

Nail Type for thin Tubes

Special internal inserts with one single cutting edge. Used for thin tubes and fast forward speeds.

 	Code	Main size				Grade	
		W	L	H	R		
	SOGX 2507	25	24,6	8	◆	◆	◆

Legend: ♦ Available in Stock - ♦ On request

Tomb StoneType

for thick Tubes

The very strong cutting edge allows the removal of the bead in heavy conditions and is therefore indicated in case of thick tubess.

Legend: ♦ Available in Stock - ♦ On request

Tomb Stone Type (US standard)

Double cutting edges tomb-stone inserts mostly used in the oil & gas tubes manufacturing

Legend: ♦ Available in Stock - ♦ On request

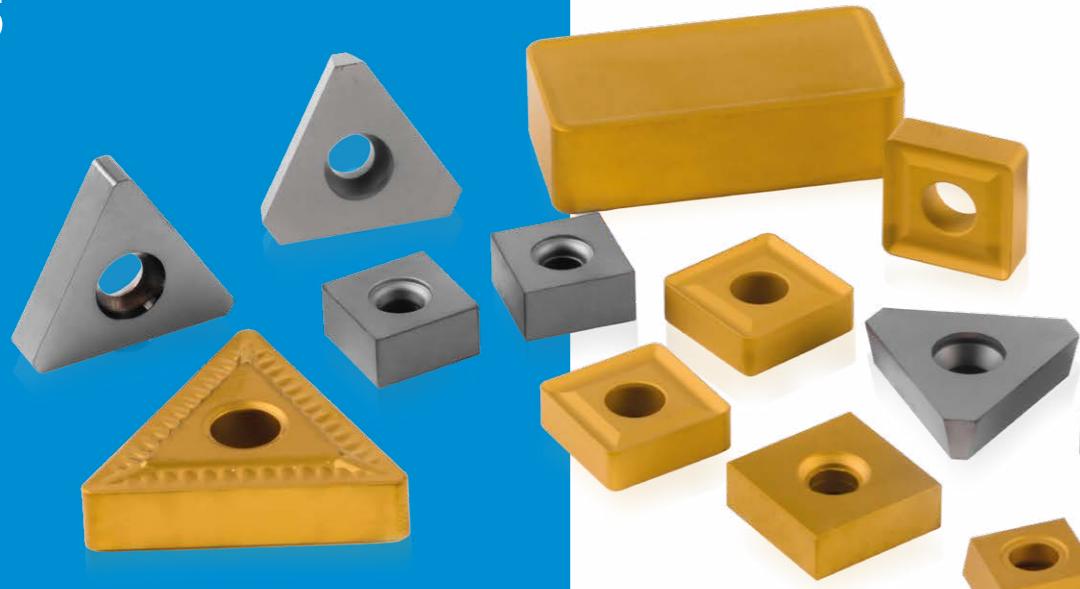

Tools for Internal Scarfing

Diamil produces tools for internal deburring and cutting ring holders, using carbide for wear parts (wheels and pins).

Tool's code	I.D. Working Range	Ring's holder	Carbide rings
RI-ME 014	14-17 mm	SH 014 - SR 0	SR 0 - AR 4,5
RI-ME 017	17-21 mm	SH 017 - SR 0	SR 0 - AR 4,5 SR 0 - AR 6,5
		SH 1 - SR 0	SR 0 - AR 6,5
RI-ME 1	20-26 mm	SH 1 - SR 1	SR 1 - AR 7 SR 1 - AR 8 SR 1 - AR 9
		SH 2 - SR 1	SR 1 - AR 7 SR 1 - AR 8 SR 1 - AR 9
RI-ME 2	26-34 mm	SH 2 - SR 2	SR 2 - AR 10 SR 2 - AR 11 SR 2 - AR 12
		SH 3 - SR 2	SR 2 - AR 10 SR 2 - AR 11 SR 2 - AR 12
RI-ME 3	32-50 mm	SH 3 - SR 3	SR 3 - AR 14 SR 3 - AR 17
		SH 4 - SR 3	SR 3 - AR 14 SR 3 - AR 17
RI-ME 4	48-72 mm	SH 4 - SR 4	SR 4 - AR 23
		SH 5 - SR 4	SR 4 - AR 23
RI-ME 5	70-100 mm	SH 5 - SR 5	SR 5 - AR 25 SR 5 - AR 28
		SH 6 - SR 5	SR 5 - AR 25 SR 5 - AR 28
RI-ME 6	100-130 mm	SH 6 - SR 6	SR 6 - AR 34
		SH 7 - SR 6	SR 6 - AR 34
RI-ME 7	125-160 mm	SH 7 - SR 7	SR 7 - AR 39
		SH 8 - SR 7	SR 7 - AR 39
RI-ME 8	150-260 mm	SH 8 - SR 8	SR 8 - AR 46

The RI-ME are to be produced and are available on request.

Chamfering and sheet metal preparation

To complete the line of products needed in pipe welding, Diamil supplies a wide range of inserts for pipe beveling and sheet metal preparation and all related spare parts, such: as beveling heads, tool cartridges and clamping systems. Upon specific request, the technical department can design the entire system for the customer.

Our Hard Metal Grades for Chamfering

All the inserts are Made in Italy entirely designed and manufactured in our factory, from the powder mixing through grinding and finishing of the cutting edge, to the final operations: the coating process, which can be CVD or PVD.

[P40]

Application range
P35-P45 / M35-M45
Uncoated

The high toughness of the grade makes it perfect for roughing applications with both continuous and interrupted cutting. The surface polishing optimizes chip evacuation.

[D812G]

Application range
M30-M45 / P30-P45
CVD Multilayer Coating.

Grade with high toughness, able to withstand the heaviest applications, both in case of continuous and interrupted cutting. The grain size and composition have been specifically designed to reduce the risk of chipping and breakage to almost zero.

[M112G]

Application range
M35-M50 / P35-P50
CVD Multilayer Coating.

Standard grade for internal scarfing. Medium grain size provides excellent stress resistance, minimizing the possibility of cracking and chipping. High-thickness coating increases resistance to wear and high temperatures.

The Company

Diamil, thanks to **over 30 years of experience** in the field, created a team able to **support customers in any technical issue** from machine settings to customized tools design for special machining.

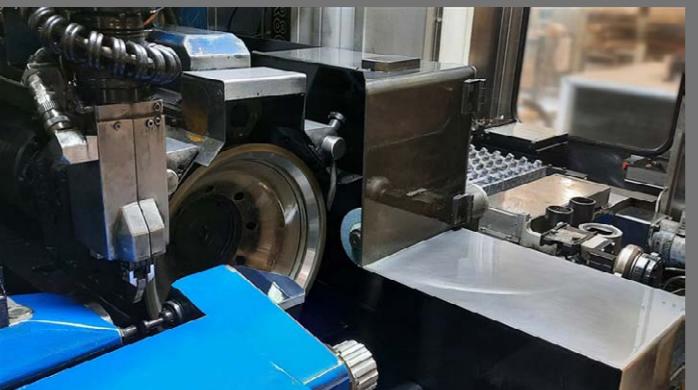

With the aim of giving to **the customer the best service**, Diamil based its offer on a mixture of competence, **high quality products** and customized solutions.

Customer Service Competence

Our skills at your disposal!

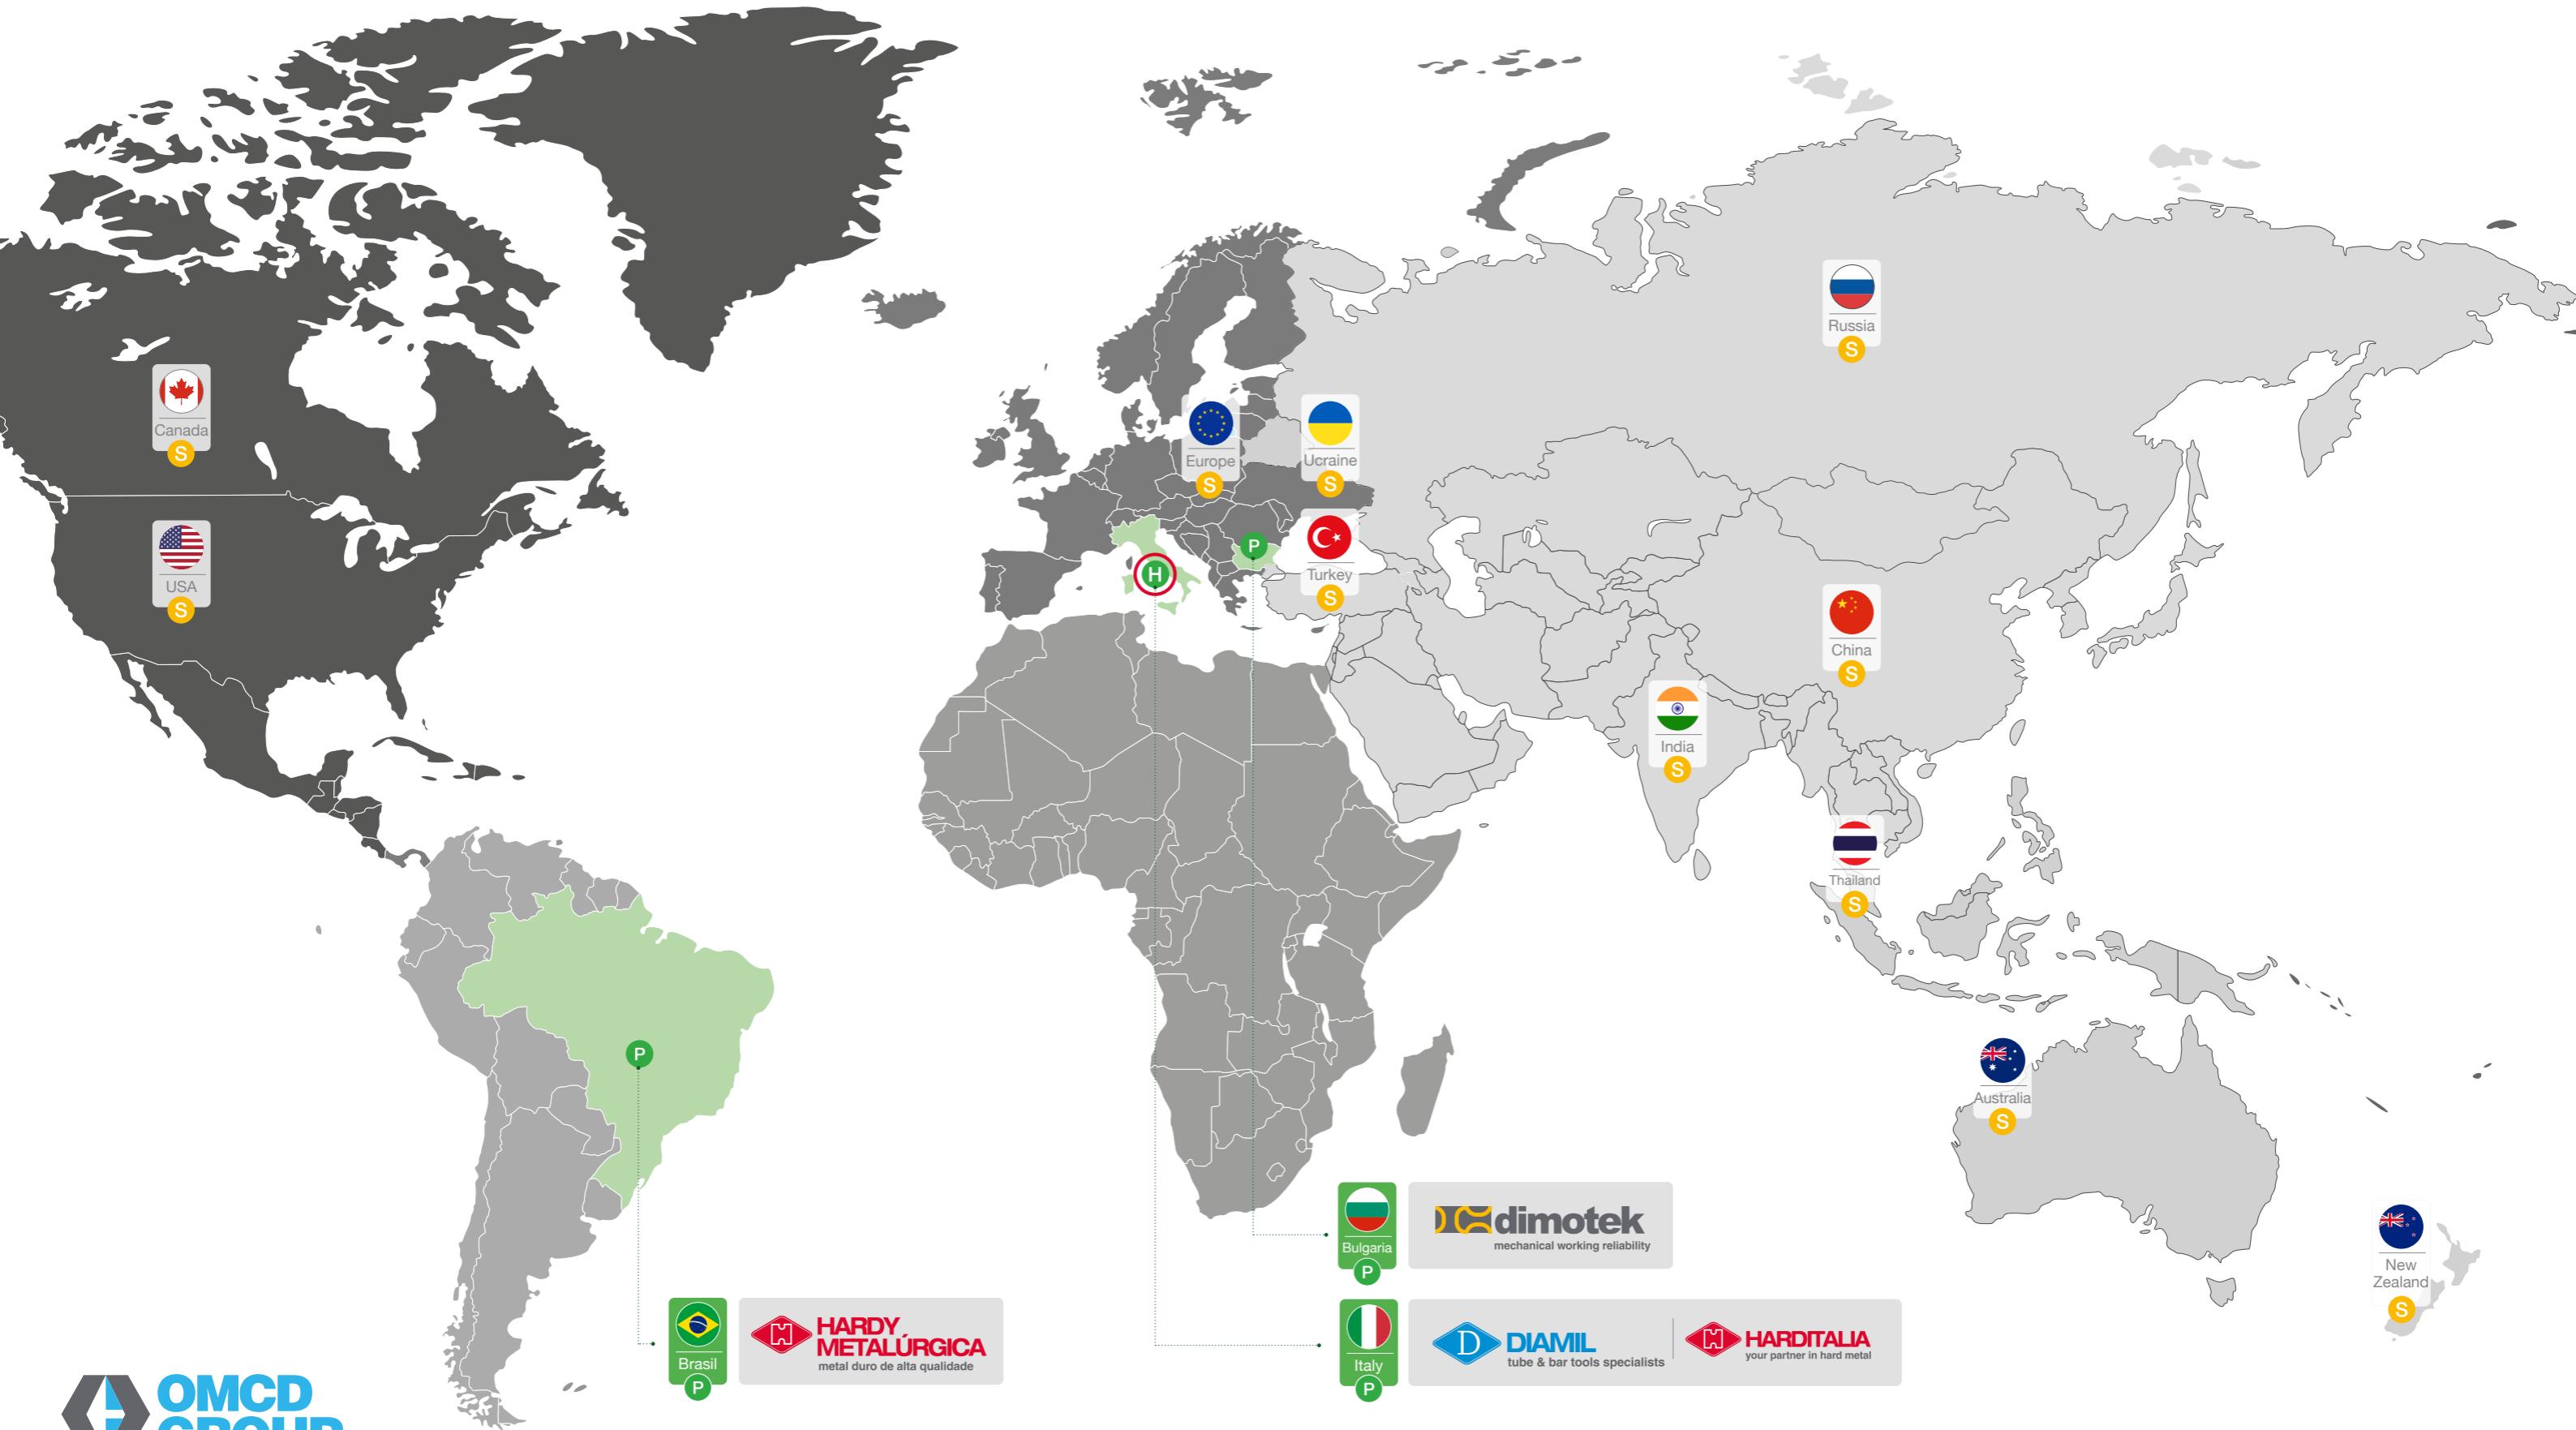

We provide expertise and support to the customer being at his side, aware that service add an extra value to a high performance product.

In the word

- | Harditalia Headquarter
- | Production site
- | Sales Office

The OMCD Group headed by the Tedeschi family for two generations, is a multinational company made up of **10 brands active in the field of Hard Metal, sintered copper/tungsten and precious metals.**

Its centralized structure and **synergy between each brand** guarantees **control of the entire production process**, from the refining of minerals to the micro-finishing operations.

Technical **competence**, continuous **innovation** and focus on **customer satisfaction** are just some of the reasons why every day more and more companies rely on OMCD Group as their commercial business partner.
